 **MANITOU**
HANDLING YOUR WORLD

1 Machine

Compactness, lifting height, capacity or configuration?
Your Manitou dealer is there to guide you and configure
your machine for the ideal solution.

1 Attachment

Our attachments offer versatility and productivity
for your everyday applications: fork, bucket,
jib, platform, etc.

Services

A well-maintained solution is an efficient solution.
From maintenance contracts to connected machines,
from extended warranties to fast delivery
of original spare parts, our comprehensive service
ensures that your Manitou is ready whenever
and wherever you need it. You take care
of your business, we take care of your machines.

YOUR MANITOU

We know you need more than just a machine.
You need tailor-made equipment, designed specifically
for your work, with dedicated attachments to maximize
its efficiency, backed up by services that fit both
your budget and your organization.
That's what Manitou offers.

Uses:

- Infrastructure maintenance
- Masonry
- Carpentry
- Demolition
- Civil engineering and public works
- Tunnels
- Events, and more

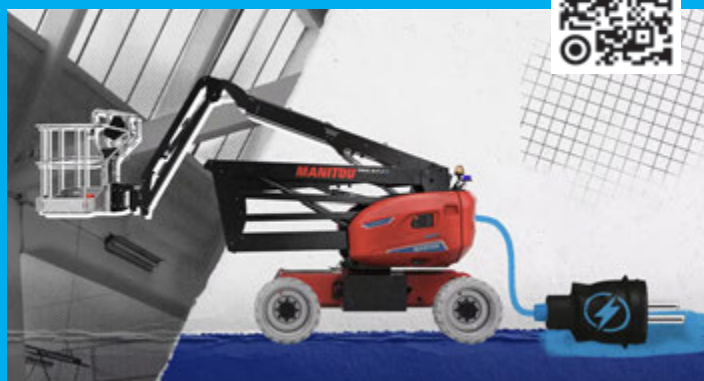

Low emissions

Manitou now offers a wide selection of low-emission
machines, with hybrid or 100% electric solutions,
depending on the model.

This means you can reduce emissions and energy
consumption while still benefiting from Manitou quality.
Quieter operation also makes it possible to adapt
working hours and access to more urban worksites.

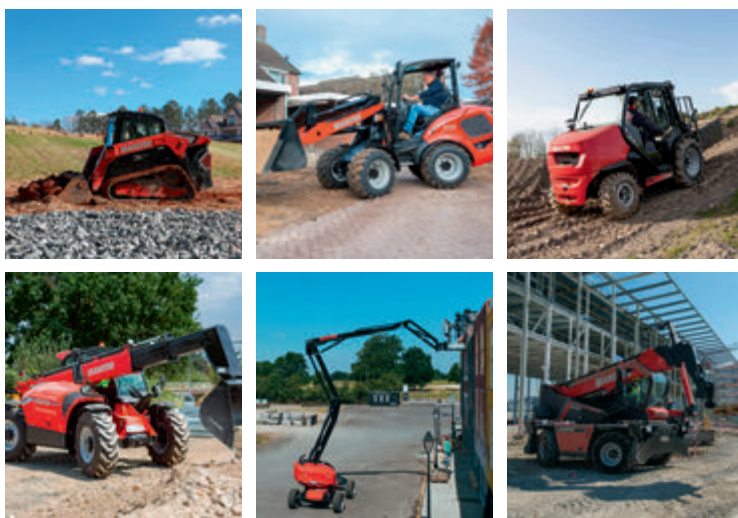

All electric, no compromise!

Our approach in video

A solution for every application

Founded over 60 years ago by the Braud family, Manitou Group now has a worldwide presence. A leader in offroad handling, the group designs, manufactures, distributes, and maintains equipment for all industrial sectors.

Recognized worldwide for its superior quality and versatility in construction, agriculture and industry. Our materials and products are designed to last.

With a comprehensive range of custom-built machines that deliver exceptional productivity in unusual situations, from family homes to large-scale construction sites, from events to earthmoving... Even when exposed to the elements, Manitou guarantees performance, anywhere, anytime.

Everyday expertise and service

Focus on your core business and rely on our network of professionals to help you with your day-to-day operations. Take advantage of our service to optimize use of your machines and improve your day-to-day productivity.

- **800 dealers worldwide**

Our dealers offer outstanding service in over 140 countries, while Manitou-trained experts provide first-rate technical support.

- **Warranty extension**

Protect your business against unexpected, off-budget expenses, with full parts and labor coverage for up to 6 years or 6,000 hours.

- **Original spare parts**

Using original spare parts is the only way to guarantee the performance and longevity of your Manitou machine.

- **8,000 expert technicians at your service**

Minimize downtime, get expert advice and rely on qualified professionals to maintain and repair your equipment.

Loader RANGE

From skid-steer loaders to articulated and backhoe loaders. Find your ideal partner for handling, earthmoving or backfilling work...

Skid-steer loaders

Rugged and rough-terrain, on tires or tracks, from 386 kg to 1.5 tonnes, discover our wide range for easy operation, even in confined, hard-to-reach spaces.

Articulated loaders

Excellent maneuverability in confined spaces, with lifting capacities from 1 t to 3.5 t.

Backhoe loaders

With high capacities for excavating, digging, backfilling, and handling, our machines perform well in a wide range of environments.

Telehandler RANGE

With their wide range of attachments, our telehandlers are versatile and suitable for a variety of applications. They are designed to navigate tight spaces and rugged terrain. The extendable jib enables you to lift loads to significant heights while overcoming obstacles.

Telehandlers

Several models are available: compact (towable) or high-rise. Working heights from 4 m to 18 m and lifting capacities from 1.2 t to 4 t.

Heavy-load telehandlers

Designed for safe handling of heavy and bulky loads. Working heights up to 12 m and lifting capacities from 9 t to 33 t.

Rotating telehandlers

The turret rotation and 360° vision make them perfect for carrying out various actions and operations without moving the truck. Working heights up to 35 m and lifting capacities up to 7 tons.

Remote control

Our MRT/MHT models are equipped with remote-control boom and stabilizers as standard. With this option, the machine can be moved remotely. This allows better visibility of the load and reduces the need to climb in and out of the cab.

Lift truck RANGE

Essential for handling loads in all kinds of environments, lift trucks are an efficient way of loading and unloading trucks, and moving and storing pallets. Manitou rough-terrain lift trucks perform even in the toughest conditions. Our models are available with 2 or 4-wheel drive and two types of transmission.

Rough-terrain masted forklift trucks

M-X models.

Working heights from 3.3 m to 6.5 m and lifting capacities from 2.6 t to 7 t.

MC-X models.

Working heights from 3.3 m to 5.5 m and lifting capacities from 1.8 t to 3 t.

Aerial work platform RANGE

Our rough-terrain aerial work platforms make it easy to work in difficult environments, and improve your productivity in complete safety.

Our articulated (internal combustion engine and electric) and telescopic (internal combustion engine) models allow working heights from 12 to 28 m.

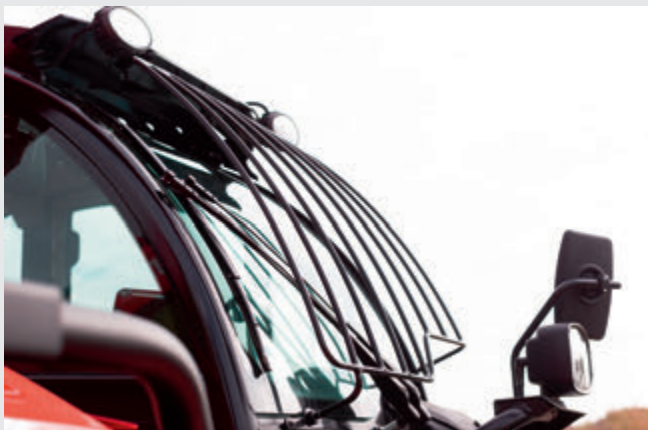

Unique, customized solutions

Durable

Manitou is committed to reducing your total cost of ownership (TCO). This optimization involves high-quality components (cab, engine cowling, protected hoses), quick and easy maintenance, and options such as Stop & Start to reduce fuel consumption... Manitou machines are built to last and have a high resale value.

Safe

Your safety is our priority!

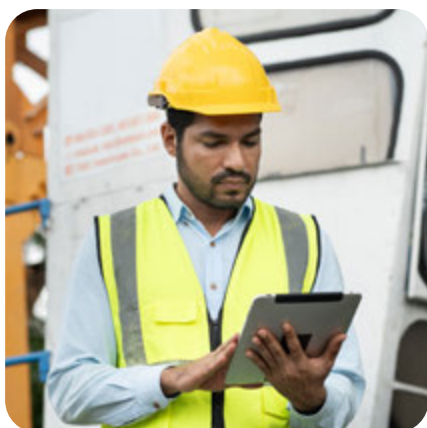

Some machines are equipped with several features: presence-sensing joystick, "easy step" access, orange seat belt, frame leveling, tilt lock, intuitive and intelligent dashboard...

As an option, on certain models, we offer the OSS (Operating Safety Pack), which guides and coaches the user, informing him in real time of any potentially dangerous maneuvers.

Spare parts all over the world

Our extensive distribution network enables us to deliver original parts quickly. Our 7 spare parts logistics centers (France, USA, Italy, India, Singapore, Brazil and South Africa) ensure we are never far from our customers.

“

« Working in construction, I'm looking for versatile, cost-effective and safe machines that help me to optimize my worksite operations. »
